

Vector Borne Disease 2024 Surveillance Report

Summit County Public Health
Report #2
Report Weeks 5 and 6 (June 16 to June 29, 2024)
MMWR Weeks 25 and 26

Public Health
Prevent. Promote. Protect.

This report will be issued from June through October of each year (or later if West Nile Virus disease is still a concern). Surveillance will include human and veterinary cases and testing of mosquito pools in Summit County. It will also include updates from Ohio and around the nation. It will include vector-borne diseases besides West Nile Virus.

SUMMIT COUNTY SURVEILLANCE

West Nile virus testing (Table 1): During surveillance period Weeks 5 and 6, there was 1 test for West Nile virus ordered by Summit County hospitals, it was negative.

Reported aseptic/viral meningitis cases (Table 5): Prior to the reporting season, there was 1 reported cases of aseptic meningitis, and no confirmed or probable cases were reported up to week 6 of the surveillance season. Aseptic/viral meningitis is the most common type of meningitis and occurs predominately in the summer and fall. While most aseptic/viral meningitis cases are due to gastrointestinal or respiratory viruses, similar symptoms may be present with arthropod-borne diseases.

Mosquito testing by the Ohio Department of Health: Based on the ODH mosquito testing summary released on June 27, 2024, 18,389 mosquitoes were collected as 346 pooled samples throughout Summit County. 3 of the pooled samples are positive for West Nile Virus.

Mosquitoes identified	18,389
Pooled samples tested	346
Positive WNV pooled samples	3

Note: All mosquitoes pools tested were *Culex spp.*

Mosquito surveillance:

Mosquitoes tested from 49 agencies in 41 counties, pooled into 2,742* samples.

West Nile virus positive mosquitoes from 7 counties:

Human surveillance:

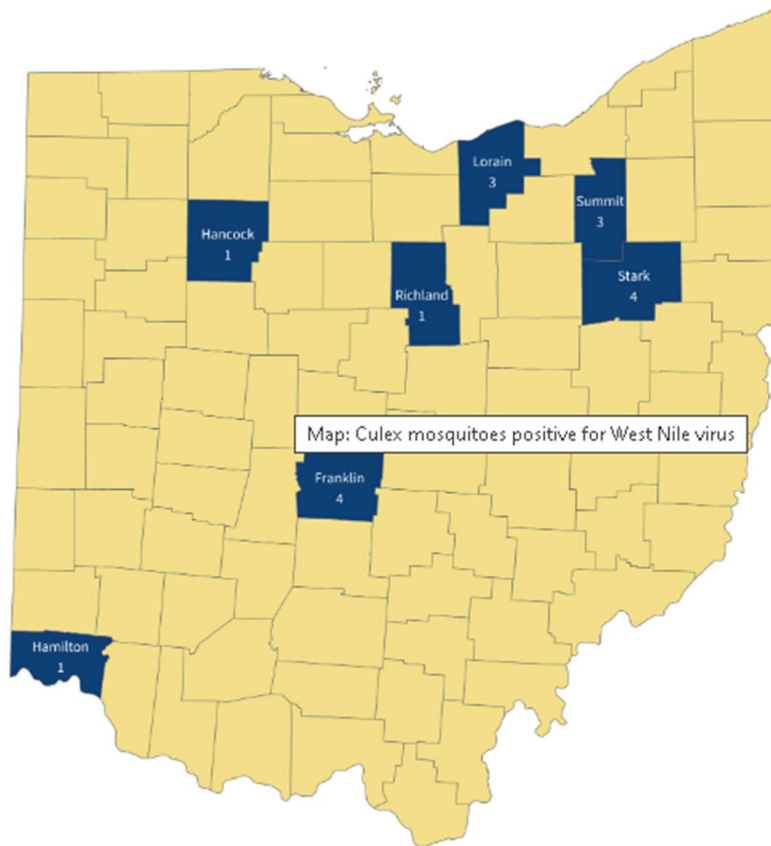

West Nile virus human cases.

Veterinary surveillance:

West Nile virus equine cases.

*Franklin (4), Hamilton (1), Hancock (1), Loran (3), Richland (1), Stark (4), Summit (3).

* In addition to samples tested by the Ohio Department of Health, Franklin County Public Health, Columbus Public Health, and Licking County Health Department test some of their samples.

Blacklegged ticks identified from 42 counties:

Human cases of Associated Tick-borne Diseases:

- 183 Human Cases- Ashland (1), Ashtabula (3), Athens (10), Butler (5), Carroll (2), Clark (2), Columbiana (3), Coshocton (1), Cuyahoga (5), Erie (1), Fairfield (24), Fayette (1), Franklin (53), Gallia (1), Geauga (1), Greene (5), Guernsey (57), Hamilton (4), Harrison (34), Highland (1), Hocking (15), Holmes (195), Huron (1), Jefferson (2), Knox (1), Licking (27), Lorain (1), Mahoning (1), Medina (4), Meigs (1), Monroe (3), Muskingum (16), Perry (26), Portage (1), Richland (2), Scioto (1), Shelby (1), Stark (9), Summit (18), Tuscarawas (32), Washington (2), Wayne (2), unknown county (1).² Anaplasmosis -Coshocton (1), Cuyahoga (1).
- 1 Babesiosis - Summit (1).

American dog ticks identified.

Human cases of Associated Tick-borne Diseases:

- 5 Rocky Mountain spotted fever (RMSF) - Athens (1), Jackson (4).

Lone Star ticks identified.

Human cases of Associated Tick-borne Diseases:

- 3 Ehrlichiosis - Gallia (1), Jackson (1), Warren (1).

Special note for travelers:

Ohioans traveling to areas where local transmission is occurring should be aware of the ongoing situation and make every effort to avoid mosquito bites. TRENDS IN VECTOR BORNE DISEASE IN SUMMIT COUNTY, 2013 - 2023

Table 8 provides data on the vector borne disease that were reported in Summit County from 2013 to 2023. The vector for Lyme disease, the blacklegged tick (*Ixodes scapularis*), was first identified in Ohio in 1989, but populations did not begin to increase dramatically until 2009. The blacklegged tick is now established throughout eastern and southern Ohio, and has been collected in all of Ohio's 88 counties.

Other notable events in vector borne disease surveillance were the increase in Chikungunya cases in 2014 (reported as other arthropod-borne diseases) and the Zika virus disease epidemic of 2016. Increases in ehrlichiosis and spotted fever rickettsiosis were observed from 2017 to 2019. The incidence of other vector-borne diseases, including West Nile virus disease and other tick-borne illness have remained consistently low.

About this report: Reporting agencies include Summit County hospital laboratories and the Ohio Department of Health. Vector-borne disease case data for Summit County are obtained from the Ohio Disease Reporting System.

Many thanks to all agencies who report vector-borne disease data weekly.

Reporting from participants may not be complete each week. Numbers may change as updated reports are received. For questions, please contact Julie Zidones (JZidones@sched.org) or the Summit County Public Health Communicable Disease Unit (330-375-2662). This report was issued on **July 5, 2024**.
